

you.integreat.it releases

Features and bug fixes- releases 3.4.36 and up

3.4.46.....	1
3.4.45.....	1
3.4.44.....	1
3.4.43.....	1
3.4.42.....	2
3.4.41.....	2
3.4.40.....	2
3.4.39.....	3
3.4.38.....	3
3.4.37.....	3
3.4.36.....	3

3.4.46

12/05/2015

- Bug – generation info ‘last_generated_on’ was set to empty on database version upgrade – fixed
- Added check for existence of ‘mdl_company_info.ExportFolderPath’ before adding
- Remove statistics on ‘mdl_gen_info.databaseversion’ before changing column length
- Bug – trace fields not added to extended fields collection for linked process stages – fixed
- Bug – exception when upgrading configuration to script file in the event files are present - fixed

3.4.45

31/03/2015

- Bug with report fields (property browser) – solved
- Bug with articles form (stock tab) - solved

3.4.44

17/03/2015

- Refactoring extended fields structure for improved performance
 - test case Lillyfoods
- Update behaviour of configuration parameter ‘maximum field depth’
 - ‘depth’ now truly represents extended fields level
- SSCC-label on picking lot
 - bug solved: error message when item count 0

3.4.43

17/02/2015

- upgrade configuration blocks version
 - version registration did not occur when upgrading configuration from you.model.it - fixed

3.4.42

12/02/2015

- you.trace.it login
 - bug when dismissing login screen using upper right cross button – fixed
 - more rigid handling of Windows user login and empty user logins
- added configuration parameter 'maximum field depth'
 - allows to specify the level of extended fields being fetched
 - for performance reasons in case of complex configurations
- added check for configuration block versions
 - do the configuration blocks as defined in the configuration match the configuration block functionality of the release?
 - warning message at you.trace.it startup if they are not in sync

3.4.41

9/12/2014

- Mozart/Articles: updated logic for determining if an article is canned (no more extra attribute on article)
- UI layouts: updated layout folder access with regard to Windows 7/8
- you.model.it upgrade database: eliminate SQLDMO-functionality from upgrade database logic

3.4.40

2/12/2014

- Update User Filters - display at startup applied default filter in menu-bar combobox (quality controls/custom classes/process operations/equipment)
- changing database version - new behavior when changing revision nr (part after the third period)
 - upgrading only revision nr (and leaving root version nr – part before third period - unchanged)
 - => database gets upgraded
 - => clients with same root version but different revision can still connect to database

NB

update of field 'mdl_gen_info.database_version' to type nvarchar(12) is included; statistics on the field are automatically dropped when they have been automatically generated by the query optimizer, if not they have to be dropped manually first

- Model changes on mdl tables
 - => new database version v3.3.0301.1 (clients targeting v3.3.0301 can still connect)
 - table mdl_company_info
 - new column 'ExportFolderPath'
 - added when upgrading database
- Model changes on configuration blocks
 - configblock blcArticles - table cls_articles
 - new column 'Pasteurize' (Product)
 - new column 'Canned' (Raw Material) – *overruled in release 3.4.41*
 - added when opening configuration (you.model.it) and upgrading database!
- cf Aspasia issues
 - MozArt - wrong unit price info on order note
 - MozArt - added mail functionality for order notes
 - MozArt Reception Planning - added Excel export functionality for stock to be acquired
 - MozArt Reception - added possibility to generate/export text file with details when confirming reception

- Articles - added possibility to indicate if article (product) needs to be pasteurized + add to production report
- Articles - added possibility to indicate if article (raw material) is canned + add to production report
- you.trace.it tree - bug in node key generation when changing user language
- configBlock Company - bug 'Transporter' not added when adding new configblock and upgrading database
- configBlock Articles - hide 'stock' tab when config block MozArt is not included
- configBlock ExternalLabels - update: copy-paste labels / preserve field values

3.4.39

9/09/2014

- config block 'ExternalLabels': bug custom tab not showing – solved
- ytiom translate function updated: first checks translation as specified in configuration, if no success uses standard translation files (before: uses configuration translation)
- config block Mozart – Reception Planning: mailing functionality for purchase order document
- config block Mozart – Purchase order document: bug prices - solved

3.4.38

11/08/2014

- filter bar and clear filter functionality added to standard toolbar in you.trace.it content lists

3.4.37

19/05/2014

Bugs fixed

- bug you.trace.it - log off -> log on -> exit
- initial loading of quality controls when loading process stage

Setup changes

- sentclient33.exe / waitform.exe: registration on Windows 8 - fixed
- BIMOPCThread.exe – not removed after uninstall – fixed (for new installs)
- Newer version Sentinel driver: Sentinel System Driver Installer 7.5.8.exe
- MS Script Debugger is installed as file but no longer executed during you.integreat.it install

3.4.36

Released 2013 – 8/04/2014

Bugs fixed

- Articles/raw materials – tab purchase units: details not updated when selecting purchase unit in tree
- Purchase/sales units: details not updated when selecting item in list
- Creation of reception lot: exception when supplying article name not in list
- Purchase units: exception when opening additional recipe twice and closing using upper-right close button
- Exception when attempting to create new purchase/sales unit from module 'Articles'
- Storage module: begin time/end time not consistently stored (Attribute ID <-> English Name)
- Storage module: begin time/end time model changes are not updated to configuration in database
- Process equipment/operations: lots conforming to the filter but still residing in the equipment (no end time defined) are not included

Features and changes

- Layouts for the standard lists of building block modules are being saved
- Activated content tabs are stored when closing the application, so when restarting:
 - Corresponding nodes in the you.trace.it tree are visualized/unfolded
 - Activating the content tabs can be forced through the registry setting
HKEY_CURRENT_USER\Software\Tracewise\you.integreat.it\you.trace.it\Settings\Shell\AutoOpenTabs
Default is false
- The maximum number of open content tabs can be set by the user
Setting is stored in registry key
HKEY_CURRENT_USER\Software\Tracewise\you.integreat.it\you.trace.it\Settings\Shell\MaxTabCount
Default is 0 (unrestricted)
- Possibility to define custom reports for building blocks
 - Available for
 - Articles (Article List)
 - Mozart (Expedition Planning List, Picking Order List, Reception Planning List)
 - The custom reports are then accessible through the popup menu
- Tri-state checkbox controls for standard you.trace.it grids (process stages/quality controls/custom classes)
 - Remark: it may be necessary to erase existing cached grid layouts for the tri-state checkboxes to become visible
- Possibility to link documents to purchase units (cf. sales units)
 - Remark: a link from purchase units to documents must be defined manually in the configuration
- Article stock tab – content and labels have been updated
- Trace functionality has been optimized
- New you.trace.it grid event available in you.model.it (Fetch Cell Style)
- you.trace.it query functionality has been optimized (filter bar / sort on head click / column width)
- Qualifications: 'undetermined' yes/no value is now displayed as 'alert'
- Archiving:
 - log on to archive from you.trace.it login-form
 - archive database needs to be on-line (restored)
 - archive database connection is not registered for next logon
 - you.trace.it shell label displays archive database name
